€ 1,150

€ 1,400

#Perspectives and further training opportunities

Master roofer

After the master craftsman training programme, you will assume leading tasks on the construction site, instruct journeymen and ensure that costs and deadlines are met.

Business management in the skilled trades

With this qualification, you will be able to improve business processes and the organisation of the company in the long term. You will be responsible for developing corporate strategies and implementing them from a business management perspective.

Field service representative

As a field sales representative, you will represent your company at the customer's site and provide both customer acquisition and customer advisory services.

Skilled installation technician

This involves explaining the exact procedures and planning the most economical and effective detailed implementation together with the customer.

Specialist leader for roof, wall and waterproofing technology

After a 9-month study programme, you can obtain a qualification for this trade parallel to the master craftsman's examination.

Manager in the roofing trade (MID)

This advanced training course is offered by the Berufsbildungswerk des Deutschen Dachdeckerhandwerks (Vocational Training Centre of the German Roofing Trade) in cooperation with the BMI Academy and the European Business School.

Crew leader

This qualification enables you to assume a wide range of responsible management tasks, such as construction supervision or work allocation.

Technician specialising in construction technology

This advanced training programme qualifies you as a state-certified technician and includes tasks in construction management, as well as the planning and implementation of construction measures.

Building energy consultant

This involves advising homeowners on suitable energy-saving measures. Using a thermal imaging camera, you measure, for example, the coldest and warmest parts of the building envelope, assess the quality of the insulation situation and check the effect of the system technology.

Qualified construction supervisor course in the roofing trade

During this course, which lasts several weeks, you will learn how to undertake responsible tasks on the construction site and how to deal with customers and employees.
